

**Our journey with the Immunotec family started
Sept of 2008 and we have been benefitting ever since!**

- written by Lois Biel about Lois Biel -

I will never forget the day I arrived at my cousin Linda's home in Ontario, Sept. 2008. I was in a lot of pain and had a lot of trouble walking but I didn't want her to see me this way so I did everything to try keep it from her.

Something was happening to my body and I had no idea what it was. I had been to doctors and had many tests which included CAT scan, MRI and x-rays but as I was told, there was nothing wrong. How could this be so? So many nights I would lay in bed and just wish I could go to meet my maker as the pain was so intense. There were moments I would lose the feeling in my right leg which would cause me to collapse if I had nothing to hold me up.

(this is a short version of my story)

Soon my cousin reluctantly told me about Immunocal. I could tell her husband was not happy but I insisted she tell me more. Because I didn't want to burden others with my health issue I kept it between me and Al as best I could but her being a nurse and very observant, she noticed something was wrong. I totally protected/guarded my right leg because even the slightest tap would send intense pain right through my body. It didn't take me long to tell her I wanted to give Immunocal a try. It was a beautiful moment when after six weeks of being on 2 pouches of Immunocal/day I could jump on the rebounder one leg at a time and my leg was no longer giving out on me. So what changed? Was this product miraculous or what? I had tried MANY products but never had anything like this happen. I was sold! From then on we learned as much as we could about the product and why it was different from other 'whey protein'. We had the privilege of spending time with the founders and especially enjoyed getting to personally know Dr. Patricia Kongshavn who was one of the co-discoverers of Immunocal. Immunotec was a research company that soon had to figure out how to market this amazing product. At first there was no way they were going to market it through 'network marketing' but they soon realized they needed people who understood the product so it would be shared with an understanding of how it needs to be taken. The molecule is delicate and must not be heated and/or put in a blender or the active ingredient would be destroyed. The rest is history or is it ...

I was doing quite well simply taking 2 pouches of Immunocal/day however I still would experience a few minor issues. Nothing I couldn't live with until fall of 2018 when I had an accident in Italy. I was walking down a very busy street in Florence Italy when all of a sudden I was pushed into a busy cobble stone street.

I ended up flat on my right side and knocked unconscious. When I came to I notice Al's hand and arm was covered with blood. That's when I was told it was my blood. I seemed to feel okay but was soon taken to the hospital as the bleeding would not stop. I was thankful there were no vehicles that drove over me and thankful I had good people willing to help in any way they could. As for the ambulance ride ... the guys were great but a very uncomfortable ride! MRI, CAT scan & X-rays at the Hospital found nothing so I was able to fly home the next day as planned.

Needless to say I had no idea this was the beginning of a long two years of trying to get back on my feet. Long story short, I had suffered a brain injury and more right hip and leg issues. Walking once again became very challenging and my energy level was extremely low. Upon returning home I went to the doctor to get myself checked over again and after more tests, x-rays and blood work it appeared nothing was wrong. Why then did I not feel like myself at all? Why did I have so much pressure in my head? I spent the next while getting around with either crutches and/or a wheelchair. My spirits were up only if I worked hard to keep them there. Very soon after, I could not control my emotions at all. I became paranoid, suicidal and isolated myself. I didn't want to see anyone! It felt like someone had taken over my body. I was totally out of control emotionally and physically I was weak. That's when I was introduced to a Functional Doctor, Corey Deacon from Neurvana Health, where my journey continued. I must add, my family doctor Dr. Jim Adams was also part of this journey as he supported me all the way and helped any way he could as I worked with Corey. I'd check with Dr. Adams every time I needed bloodwork and if possible he would assist in getting it done. However, most of the bloodwork I needed to have done was not paid for by our current healthcare.

Very soon into my journey with Corey it was discovered through extensive brain tests that my brain had been hijacked. That made NO sense to me at all but then because of how I was feeling it made total sense.

I soon began seeing Corey twice a week to have Neurofeedback. It was a slow go but after a few months I began seeing results but still something seemed off. That's when Corey decided he wanted to do bloodwork to see if I had Lyme disease. To my surprise the bloodwork came back full blown Lyme. Yes, I was very surprised, however it was soon after that W5 came out with a documentary 'Bitten' and it started to make sense. I had most of the symptoms. It seems that may have been my problem years earlier and the accident just brought it all to the fore front. Thankful again for Immunocal as it seemed to be the one thing that kept me going even in my weakest darkest moments. You see, many things deplete our Glutathione levels and when that is low nothing seems to work as good as it is intended to.

Now what! Lyme disease is not an easy thing to get rid of but with Corey's help, a lot of tests and blood work I am happy to say I am free of all the bacteria that causes Lyme disease. An easy journey ... NO! Lyme disease can be very debilitating and hard to get rid of. Without a doubt it takes a kind caring Dr. like Corey to walk alongside you. In the beginning I had tears of sorrow, now I have tears of joy as I continue to see a brighter tomorrow. I am no longer living as a depressed, paranoid, suicidal person! Thank you Corey! I believe my journey with Lyme disease started decades ago and it didn't come from a tick bite. The symptoms of Lyme disease can creep up on you and they can vary from person to person. I am now left with some damage which I will continue to work on until it is no more. **A quitter I am not!** I have many things to be thankful for in this crazy world and indeed I am. I continue to take my Immunocal because I know it is one product that helps keep my body making Glutathione at the cellular level and with everything I'm learning, Glutathione is needed to optimize the effectiveness of zinc, C, D, Mag ... yes, everything, including protecting us from many side effects we can have from prescription drugs the common cold, the flu and yes even covid!

Knowledge is powerful when applied!

I know many of you who are reading this may not like buying from a company that chooses to sell through 'Network Marketing'. I get that, but why not take a closer look. Do some research and put some of that behind you. Maybe there are a few companies you'd like to buy from. Really, buying a membership lets you get product at a discount and then if you share with someone and they share with someone isn't that okay? It really warms my heart to help others. When I find something proven to work, I like to share. Is it wrong if someone you know makes a little off your order? Should it all just go to Amazon? I'd like to encourage you to try put that aside. There are great products and great companies out there that you could benefit from if you're willing, and yes, there are many that don't fall into this category. Some of us only share because we care and the science is there.

Dr. Gustavo Bounous and Dr. Patricia Kongshavn discovered the benefits of this specific protein isolate in the 1980s. In 1996, the scientists teamed up with network marketing veterans Chuck Roberts, John Molson, and Dieter Beer to establish Immunotec. Today, the company has operations in countries such as Canada, USA, Dominican Republic, Ecuador, Guatemala, Mexico, Colombia, Peru, United Kingdom, Ireland, Spain and Portugal. Immunotec is one of the few MLM companies that have a (non-drug) nutritional product listed in the Physicians Desk Reference (PDR) and the Compendium of Pharmaceuticals and Specialties (CPS). If you are interested in joining us on this we'd love to be part of your journey and you ours!

Feel free to connect with us or get back to the person who shared my story. Together we can make a bigger difference.
